Business Company

Chronology & development:

- Foundations:
 - HJ Elektronik in 1984
 - EFFEKTA® Regeltechnik GmbH in 1990
 - EFFEKTA® (Taiwan) in 1991
 - EFFEKTA® (Hungary) in 1998
 - Rottweil sales department in 1999
 - Amalgamation of business of Tettnang and Rottweil in Rheinwaldstraße 34, Rottweil in 2007
- Management-buy-out in 2000 with new directors:
P. Androt, G. Kremer and R. Schmeh
- Today:
the company employs 62 staff.

EFFEKTA® has been successfully operating on the UPS market for over 18 years. Over the years, our company has come to epitomise reliability and quality and we are now one of the leading UPS manufacturers in Germany. This success has been made possible by consistent ongoing, development and the use of innovative technology.

The fact that EFFEKTA® UPSs are used every day in renowned companies such as Berliner Verkehrsbetriebe (Berlin Municipal Transport Company), Daimler Chrysler, SIEMENS, Deutsche Telekom, BASF, Bayer-Leverkusen, Deutsches Institut für Luft- und Raumfahrt (German Aerospace Centre) and many more is testament to their high quality (s. p. 98/99).

USV-Systems
Pegasus 10-40 kVA
Pegasus 60-160 kVA
Pegasus 200-300 kVA
(from left to right)

Most UPSs are employed to safeguard data processing functions in case of power disturbances. EFFEKTA® UPSs are not only suited to use with computers, but also with all sensitive, power-dependent units.

The EFFEKTA® range provides a solution for every kind of application we have got a solution. We are also experienced in custom designs and small production runs.

We now have expanded our array of products to include rectifiers, inverters and power supplies for every requirement and also DC UPSs for telecommunications or wireless network operators.

All models come in standard enclosures or can be supplied for switchboards or DIN-rails.

Our array of products:

- Line-interactive UPSs up to 3.2kVA
- Online double-conversion UPSs up to 650kVA
- Single- and three-phase standalone units
- 19" versions and more special enclosures
- Redundant systems, AC and DC up to 650kVA (KW)
- UPS management solutions
- Inverters / rectifiers
- DC UPS systems
- Power supplies
- Batteries 2/6/12V, 0.8 ... 2000Ah
- "BACS" battery control/-management
- **Custom solutions**

EFFEKTA® family of batteries

Leasing with our partner VR LEASING is available hence.

UPS classification

Usable UPS class	Power disturbance						
	Power failure >10ms	Voltage fluctuations <16 ms	Peaks 4-16ms	Under-voltage	Over-voltage	Lightning effects	Surge <4ms
VFI	✓	✓	✓	✓	✓	✓	✓
VI	✓	✓	✓	✓	✓	✗	✗
VFD	✓	✓	✓	✗	✗	✗	✗

Two different technologies are used to provide a consumer with uninterrupted power. The norms EN 50091-3 and IEC 62040-3 serve to differentiate the two technologies and assess their protection.

VFI: UPS output voltage **and** frequency are **independent** of line voltage **and** frequency or comparable modifications.

Previously used definitions: online double-conversion, continuous operation

Units: MH, MH-RM, MHD, MHD-RM, MKD, MKD-RM, Pegasus, Zephyr, Quasar

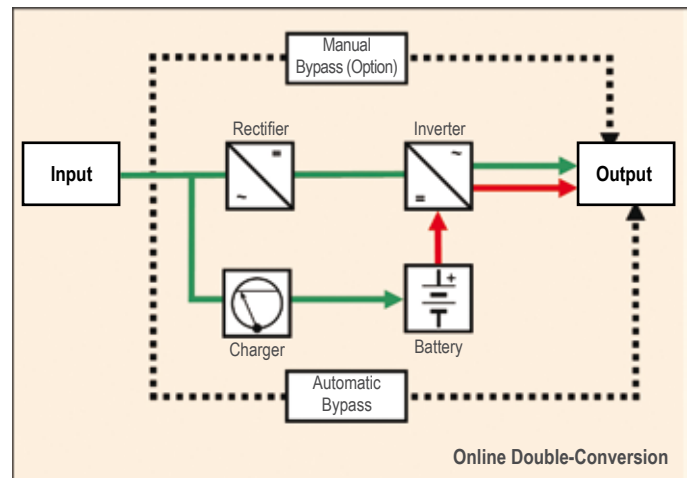

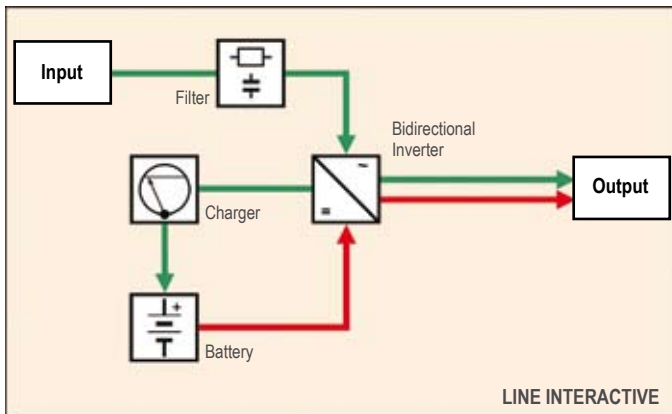

VI: UPS output voltage is **independent** of line voltage or comparable modifications (voltage-stabilized)

Previously used definitions: line-interactive, single-conversion, delta conversion

Units: MT, MT-RM, ME, MI-RM

VFD: UPS output frequency **and** output voltage is **dependent** on line frequency **and** line voltage or comparable modifications

Previous used definition: off-line, stand-by

Line-interactive systems (VI)

- Short transfer time
- Bi-directional inverter
- Output voltage mostly pure sine wave / in some cases modified sine wave
- Attractive price
- Booster-function

Areas of application:

- Telecommunications
- CAD appliances
- SPS systems
- Small servers

Models:

- ME series
- MI-RM series (19")
- MT series
- MT-RM series (19")

Online double-conversion (VFI)

- Securest UPS technology
- Protection against all types of disruption
- Stable output voltage
- No transform time
- Bypass function

Areas of application:

- Telecommunications
- Servers
- Measuring systems
- Medical equipment (not life-support)
- Critical industrial and IT applications

Models:

- MH / MH-RM series (19")
- MHD / MHD-RM series (19")
- MKD / MKD-RM series (19")
- Pegasus
- Zephyr
- Quasar

ME

Line-interactive

400, 500, 600, 650, 800, 1000, 1500VA

The ME series offers as a succession model of the proven MI series reliable protection before current failures.

It was technically optimised and delivers optimum protection and improved communication possibilities for the electronic data processing with its digital circuit.

As a reasonable line-interactive model it is suitably for the application on pc's, workstations and network components.

Features

- UPS-Classification VI-SY-333 in accordance with IEC 62040-3
- Line-interactive technology
- Microprocessor-based regulation
- Automatic frequency synchronization
- Overload & short circuit protection
- RS-232, and SNMP via optional adapter
- optionally USB port
- Managementsoftware for Windows '95,'98, 2000, 2003 Server, NT, XP, Vista (Business and higher), Novell, Unix
- 24 months' warranty

Specifications

Model			ME 400	ME 500	ME 600	ME 650	ME 800	ME 1000	ME 1500
Input	Voltage (VAC)		170-280VAC						
	Frequency (Hz)		50/60Hz						
	Synchronous zone		45-65Hz						
Output (AC-Mode)	AVR Regulation		Boost +13%						
			Buck -13%						
Output (INV.mode)	Voltage		230VAC						
			+/-15%				+/-10%	+/-15%	
	Frequency		50/60Hz±1%						
	Waveform		Modified sinewave						
	Capacity (VA/W)		400/225	500/250	600/300	650/325	800/425	1000/600	1500/900
Battery	Transfer time (ms)		Typical 2-6ms						
	Autonomy at full load in min.		6	6	4	4	3	5	4
	Voltage		12VDC	12VDC	12VDC	12VDC	12VDC	24VDC	24VDC
	Type		Maintenance free lead acid						
	Capacity		5Ah	7Ah	7Ah	7Ah	9.5Ah	7Ah	9.5Ah
	Quantity		1	1	1	1	1	2	2
	Recharging time		8 hours to 90%					6-8 hours to 90%	
DC start			Yes						
Self diagnostics			Upon power-on or software control						
Indicator	LED		2 LEDs (AC mode, battery mode, fault)					4 LEDs: line, backup, fault, overload	
Protection	Overload	AC mode	Buzzer warning and fuse will open					Continuous buzzer warning	
		INVmode	Buzzer warning and UPS-shutdown					>100% continuous warning	
			>110% UPS shut off after 10s						
	Short circuit		AC mode: input fuse and electronic circuit, Inv. Mode: electronic circuit						
	Noise suppression		EN50091-2						
	Spike suppression		-					EN61000-4-5	
	Battery over-drain		Battery low warning and UPS shut off						
Alarm	Modem / network		RJ45						
	Audible		Line failure, battery low					Line failure, battery low, over-load/fault	
Physical	Dimensions (HxWxD)		71x95x357mm					234x147x375mm	
	Net weight		5.4kgs	5.8kgs	5.8kgs	5.8kgs	6.4kgs	10.6kgs	14.2kgs
	Outlet (IEC)		3	3	3	3	3	6	6
Environmental	Operation temp.		0-40°C						
	Operation humidity		0-90% (non condensing)					0-95% (non condensing)	
Communication	Interface type		RS232 SUB D 9 / optionally USB						
Safety conformance	Safety standard		EN50091-1						
	EMC / surge standard		EN50091-2, EN61000-3-2, EN61000-3-3						
	Mark		CE						

MI RM

Line-interactive 600-1200VA

MI-Series is a cost-effective line-interactive system, that protects sensitive consumers from power blackouts.

Areas of application are computers and smaller servers and especially active network components in 19" switchboards.

- UPS-classification VI-SY-333 in accordance with IEC 62040-3
- Line-interactive technology
- Compact construction (only one 19" unit)
- Microprocessor-based regulation
- Automatic frequency synchronisation
- RS-232, opto-coupler and SNMP via adapter
- Management software for Windows 95, 98, 2000, 2003 Server, NT, XP, Vista (Business and higher), Novell, Unix
- 24 months' warranty

MI 1200 RM (rear view)

Specifications

Type	MI 600 RM	MI 1200 RM
Output		
Power VA/Watt	600/325	1200/720
Max current at 230 V (ampere)	2.6	5.3
Sockets	3 x nema sockets	3 x nema sockets
Output voltage	230V \pm 10%	
Frequency	50/60Hz auto	
Waveform	Step wave	
Transfer time	Approx. 4 msec.	
Input		
Voltage	170-280VAC (230VAC)	
Frequency	50Hz (45-55) / 60Hz (55-65) auto	
Boost (+13%)	Yes	
Buck (-13%)	Yes	
Batteries		
Full load	5 min	5 min
DC voltage	12VDC	24VDC
Accumulators	7Ah-6V	7Ah-6V
Type	Lead-acid, maintenance-free (VRLA)	
Recharge time	8-10 hours up to 90%	
Efficiency AC-AC	>94%	
Auto-restart	Yes	
Audible noise	Noiseless	
Display		
LED (UPS Status)	Line, Batt, Fault	
Acoustic alert	Yes	
Protection		
Overload	Yes	
Lightning	ANSI/IEEE587 Class A	
EMC/LVD	EN50091-2, EN50091-1	
Certificates and tests	CE	
Communication	RS232 / opto-coupler / SNMP via adapter	
Environment		
Temperature	0-40°C (UPS without batteries)	
Humidity	0-95% (non-condensing)	
Mechanics		
Dimensions	1U x 19" x 245mm deep	1U x 19" x 350 mm deep
Weight	8.2kg	13.2kg

MT
MT

Line-Interactive 700, 1000, 1500, 2000, 3200VA

The MT Series is a progressive line-interactive UPS, that protects sensitive consumers from power blackouts, spikes and other disruptions. Areas of application are computers, remote telecommunications and other computer-aided systems. The unit's compact and stable construction provides additional security and flexibility of use.

- UPS classification VI-SS-311 in accordance with IEC 62040-3
- Line-interactive technology
- Microprocessor-based regulation
- Pure sine wave output
- Temperature sensor
- Automatic frequency synchronisation
- RS-232, opto-coupler and SNMP via adapter
- Management software for Windows 95, 98, 2000, 2003 Server, NT, XP, Vista (Business and higher), Novell, Unix
- 36 months' warranty

MT RM

Line-interactive 700, 1000, 1500, 2000, 3200VA

The MT Series is a progressive line-interactive UPS, that protects sensitive consumers from power blackouts, spikes and other disruptions. Areas of application are computers, remote telecommunications and other computer-aided systems. The enclosures of the MT Series are almost the most robust and compact racks on the UPS market (starting from a 300mm mounting depth).

- UPS classification VI-SS-311 in accordance with IEC 62040-3
- Line-interactive technology
- Microprocessor-based regulation
- Pure sine wave output
- Temperature sensor
- Automatic frequency synchronisation
- RS-232, opto-coupler and SNMP via adapter
- Management software for Windows 95, 98, 2000, 2003 Server, NT, XP, Vista (Business and higher), Novell, Unix
- 36 months' warranty

MH
MH

Online double-conversion 700, 1000, 1500, 2000, 3000 VA

The MH Series is a state of the art, microprocessor-controlled online double-conversion UPS solution with an electronic bypass for supersensitive and critical applications such as servers, workstations, and measuring or industrial machines.

- UPS-classification VFI-SS-111 in accordance with IEC 62040-3
- Online double-conversion
- Auto-select input frequency
- Pure sine wave output
- Microprocessor-based regulation
- Automatic frequency synchronisation
- Intelligent battery management
- RS-232, opto-coupler and SNMP via adapter
- Management software for Windows 95, 98, 2000, 2003 Server, NT, XP, Vista (Business and higher), Novell, Unix
- Temperature sensor
- 36 months' warranty

MKD

MKD 1000

To the right: Rear view

To the left: Front view

Description

The MKD UPS is a modern, microprocessor controlled online double-conversion UPS.

The MKD UPS features electronic bypass and is to be applied with supersensitive and critical applications like servers, workstations, metrological or industrial systems.

Features

- UPS-classification VFI-SS-111 (IEC 62040-3)
- Extraordinary wide voltage range (118-300VAC @ <50% load)
- User-friendly LCD-Panel
- Online double-conversion
- Sine wave output
- Microprocessor controlled
- Automatic frequency detection
- Equipped with RS-232 port as standard
- Slot for optional adapters: relay card, opto-coupler, USB or SNMP
- Management software for Windows '95,'98, 2000, 2003 Server, NT, XP, Vista (Business and higher), Novell, Unix
- Optional XL-version with external battery cabinets
- 36 months' warranty

MKD-RM

Right hand picture:
MKD 2000/3000 RM

Description

The MKD UPS is a modern, microprocessor controlled online double-conversion UPS.

With its extraordinary compact design MKD RM can specially be used in racks with a minimum of space capacity.

The MKD UPS features an electronic bypass and is to be applied with supersensitive and critical applications like servers, workstations, metrological or industrial systems.

Bottom picture: MKD 700/1000 RM

Features

- UPS-classification VFI-SS-111 (IEC 62040-3)
- Extraordinary wide voltage range (118-300VAC @ <50% load)
- User-friendly LCD-Panel
- Compact design: only 2U per slot already from 415mm depth (700/1000VA)
- Online double-conversion
- Sine wave output
- Microprocessor controlled
- Automatic frequency detection
- Equipped with RS-232 port as standard
- Slot for optional adapters: relay card, opto-coupler, USB or SNMP
- Management software for Windows '95,'98, 2000, 2003 Server, NT, XP, Vista (Business and higher), Novell, Unix
- Optional XL-version with external battery cabinets
- 36 months' warranty

MH 6000

MH 6000 incl battery cabinet

Online double-conversion 6000VA with 1-phase input

MH 6000 is a progressive development of UPS MH 5000/7000. With its fast DSP (Digital Signal Processing) controller it offers a new sine-wave quality and high performance in controlling input & output. Digitalisation of all circuits accelerates, optimises and reduces the number of components and increases the standard lifetime of important parts.

The reliability and availability of the power line has been improved considerably compared to existing switching technologies.

A wide range of easy-to-use extension options enable the UPS to be integrated easily for any application. Its modern design, compact dimensions and low audible noise make it suitable for all kinds of offices.

- UPS-classification VFI-SS-111 in accordance with IEC 62040-3
- True Online-Double conversion
- Digital control processor
- Dual input loops
- Smart eco mode
- Programmable frequency processor
- Easy-to-set user personalization
- Power range and runtime scalability
- RS-232 + EPO (equipped as standard)
- Additional slot for optional relaycard or SNMP-adaptor
- Management software enclosed
- 24 months' warranty
- Optional easy-to-use parallel installation
- Optional galvanic isolation transformer
- Optional hot swappable batteries

Audible noise	55 dB(A) in 1 m distance (depends on load and temperature)

MH 6000 RM

6000VA online double-conversion with single-phase output

MH 6000 RM is a fully digital UPS from EFFEKTA®. With its fast DSP (Digital Signal Processing) controller it offers a new sine-wave quality and high performances in controlling input and output.

Digitalisation of all circuits accelerates, optimises and reduces the number of components and increases the standard lifetime of important parts.

The reliability and availability of the power line has been improved considerably compared to existing switching technologies.

A wide range of easy-to-use extensions enable the UPS to be integrated easily for any application.

- UPS-classification VFI-SS-111 in accordance with IEC 62040-3
- True online double-conversion
- Digital control processor
- LCD display, 30 different status messages
- Sine wave current consumption
- Pure sine wave output
- Digital battery management
- Modular battery extension
- RS-232 + EPO (equipped as standard)
- Additional slot for optional relaycard or SNMP-adaptor
- Management software enclosed
- 24 months' warranty
- Optional external bypass

MHD 10-20kVA

**Online double-conversion 10-20kVA
with 1-phase (10kVA) input
or 3-phase (10, 15, 20kVA) input**

The MHD 10-20kVA with its fast DSP (Digital Signal Processing) controller offers a new sine-wave quality and high performance in controlling input & output. Digitalisation of all circuits accelerates, optimises and reduces the number of components and increases the standard lifetime of important parts.

The reliability and availability of the power line has been improved considerably compared to existing switching technologies.

A wide range of easy-to-use extension options enable the UPS to be integrated easily for any application. Its modern design and compact dimensions make it suitable for all kinds of offices.

Features & Advantages

- UPS-classification VFI-SS-111 (IEC 62040-3)
- Online Double-Conversion
- Multiple Microprocessor design base
- Detachable control panel with LCD
- Wide input voltage range
- Optionally parallel design
- DC start and automatic self-diagnostic function
- High capacity of battery through extension packs
- Slot for alternatively RS232, SNMP or relay card
- High efficiency design
- Low heat dissipation in long term operation
- 24 months' warranty

Zephyr

True online double-conversion, 10-30kVA, 3-phase input, 1-phase output

Zephyr generates a reliable and uninterruptible power line. It is a new true online double-conversion unit with inverters ideally suited to IT and industrial applications.

- UPS-classification VFI-SS-111 in accordance with IEC 62040-3
- Online double-conversion
- Input power factor 0.95
- Sine wave current consumption
- Wide input voltage range
- Digital control
- 2 separate infeeds
- Automatic and manual bypass
- Modular battery extension
- RS-232, communication and (SNMP via adapter)
- Fully front-operable
- 24 months' warranty

Quasar 10-40

True online double-conversion, 10-40kVA, 3-phase input, 3-phase output

Quasar generates a reliable and uninterruptible power line. It is a true online double-conversion unit with 100kHz inverters and is ideally suited to most IT and industrial applications.

Up to 6 systems can be connected in parallel for redundant operations (n+1 operation) or for power increase.

- UPS-classification VFI-SS-111 in accordance with IEC 62040-3
- Online double-conversion
- Input power factor 0.95
- Sine wave current consumption
- 100% asymmetric load (>10 s)
- 2 separate infeeds
- High short circuit current ($3 \times I_{\text{nenn}}$)
- Wide input voltage range
- "Power save" mode
- Automatic and manual bypass
- Modular battery extension
- Fully front-operable
- RS-232, communication and SNMP via adapter
- 24 months' warranty
- N+1 redundancy optional

Quasar 60-120

Online double-conversion, 60-120kVA, with 3-phase input, 3-phase output

The UPS Quasar 60-120kVA is a progressive development of UPS Quasar 10-40kVA version.

The Quasar enables a reliable and uninterruptible power line. It is a double-conversion unit for supersensitive industrial and IT applications current available.

Up to 6 systems can be connected in parallel for redundant operations (n+1 operation) or for power increase.

- UPS-classification VFI-SS-111 in accordance with IEC 62040-3
- Online double-conversion
- Input power factor 0.95
- Sine wave current consumption
- 100% asymmetric load (>10 s)
- 2 separate infeeds
- Wide input voltage range
- "Power save" mode
- Automatic and manual bypass
- Modular battery extension
- Menu-controlled LCD display
- Fully front-operable
- RS-232, communication and SNMP via adapter
- 24 months' warranty
- N+1 redundancy (optional)

Pegasus 10-40kVA

10-20 kVA 3/1-phase

10-40 kVA 3/3-phase

Online double-conversion 10, 15, 20, 30, 40kVA

The PEGASUS is a online double-conversion UPS system with 1- or 3-phase output. It can be configured parallel-redundant. Up to 6 Systems can be connected in parallel for redundant operations and increases the availability.

The electronic components are up to highest standards as known from military requirements. So you find an UPS system with enhanced reliability, availability and safety.

The PEGASUS 10-40kVA is an UPS system with modular design. Each power module offers complete self-diagnosis to simplify the “on field” trouble-shooting.

The usage of IGBT rectifiers reduces the distortion of dependened mains. The current drain is almost ideal sinus and the power factor was increased in comparance to traditional thyristor design.

- UPS classification VFI-SS111 in accordance with IEC 62040-3
- Online double-conversion
- IGBT rectifier
- Input power factor >0,99
- Modular technology
- Models with 1- or 3 phase output available
- Modules with progressive self diagnostics
- High efficiency
- Output sine wave
- Digital control
- Comfortable LCD display
- Compact design
- Low weight
- RS-232 (equipped as standard)
- Additional slot for optional relaycard, RS485- or SNMP-adapter
- 24 months' warranty
- Optionally incl. BACS battery management
- Optionally up to 6 devices parallel
- Optionally external battery extension

MHD Modular

Online double-conversion 4-24kVA

MHD Modular is a scalable single phase or three-phase double-conversion UPS and can be configured to a capacity of 4kVA, 8kVA, 12kVA, 16kVA, 20kVA, 24kVA with maximum 6 modules. It can be configured to parallel redundancy which provides the maximum reliability. And delivers power output per modules from 4kVA to 24 kVA.

The MHD Modular is scalable in the capacity between 4-24kVA as well as scalable in autonomy time with additional external battery cabinets, or it can be configured for a N+X parallel redundancy as well..

Each UPS system includes maximum six UPS modules that each module is operating independently. If any one UPS module fails, the load is instantaneously redistributed among the remaining modules and the defective UPS module is automatically taken off-line from the system. Maintenance personnel can easily change the defective module during normal operation without disturbing the reliability.

- UPS-classification VFI-SS-111 (IEC 62040-3)
- Online double-conversion
- Modular design
- Scalable capacity in 4kVA steps up to 24kVA
- 1- or 3-phase input
- Hot swappable modules
- Sinewave output
- Digital signalprocessor
- Clearly arranged LCD display
- Modular battery extension
- Optionally incl. BACS battery management
- Compact design
- Little weight
- RS232, RS485 and expansion slots for different communication ports (SNMP, Relais)
- 24 months' warranty

Casing variation with additional space for isolation transformer or other

The 4kVA-modules of EFFEKTA® MHD Modular provide advanced UPS technology with high operating efficiency. The System absolutely prevents power failures, power sags, surges, brownouts, line noise, spikes, frequency variations switching transients and harmonic distortion.

With its fast DSP-controller (Digital Signal Processing) it offers a highend sinewave-quality and high performance in controlling input & output.

The display of MHD Modular shows all important UPS informations in a userfriendly way. The backlight improves the readability. All important messages concerning the configuration and diagnosis as well as controls and management of the UPS can be seen at a glance.

You can watch all data like input and output voltage, frequency, connection data, position and and actual state of the modules. The facility of inspection is provided by additional LEDs for informations about most impoertant state of operation like „normal“, „on battery“, „bypass“ and „fault“.

Also the MHD Modular provides communication ports for remote monitoring via EDP. Standard are a RS232 and RS485 port at ther rear of the UPS. Additionally the intelligent slot provides more options for EDP or other monitoring functions for your UPS management. Amongst others SNMP-/WEB adapters or relais cards could be used.

MHD Modular

The MHD Modular is a scalable online double-conversion UPS and with up to 6 modules it can be configured to 4kVA, 8kVA, 12kVA, 16kVA, 20kVA and 24kVA.

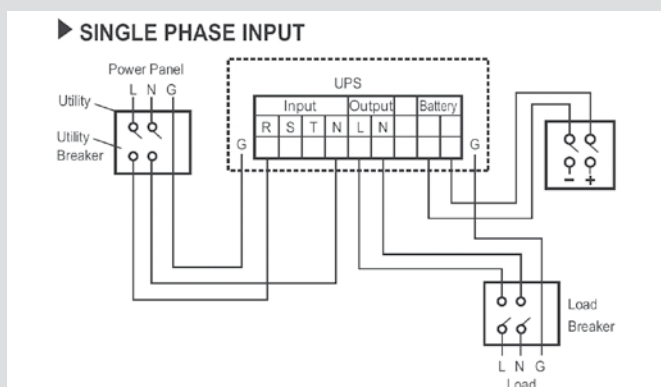

One of the most important advantages of the modular and redundant design is the improved safety and reliability. If the MHD Modular is configured to N+X parallel-redundancy, the load is instantaneously redistributed among the remaining modules. Because each module is a separately operating device, there is no central control system that could be damaged, so this also increases the safety.

The MHD Modular has got hardwired outputs with one phase and can be used with one or three phase inputs alternatively. In case of operating with three phases, each of them is monitored by the UPS.

Additional modules can be installed to the MHD Modular during normal operation without much time and effort. This hot swappable method provides subsequent extension of the UPS system without any disturbance of normal operation of the users, so this system provides saving of costs. Also the possibility to change defective modules during normal operation without any disturbance of the users leads to more saving of costs.

Software

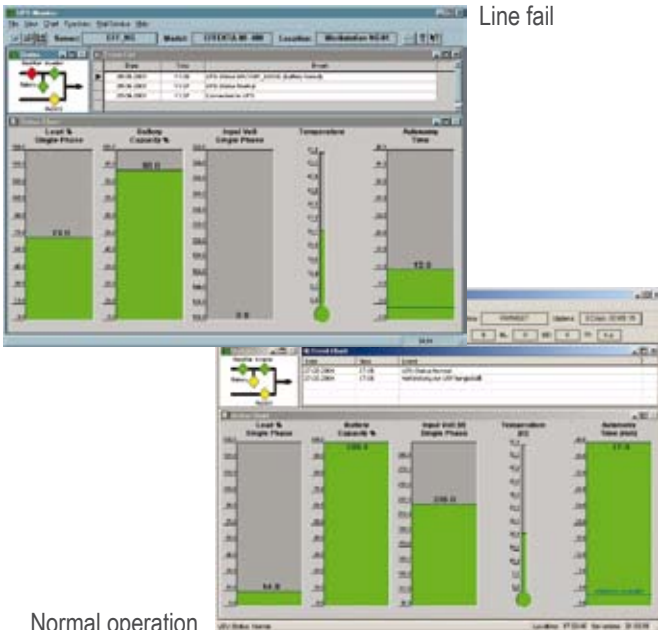

for all EFFEKTA® AC UPSs (400VA-300kVA)

The UPS management software solution PowerShut Plus runs as a client/server application for heterogeneous networks or local computers. It works on Windows 95/98/2000/NT/XP/Vista (Business and higher), Novell, Linux and all current Unix derivatives. It also includes an SNMP agent for Windows NT and Novell. All Servers on the network can be shut down via RCCMD (Multiserver-Shutdown). The software provides all important UPS information such as battery level, temperature, condition of line-voltage and others in clear graphical displays. Disruptions can be reported by e-mail, mobile phone or fax.

- Available for Windows 9x, NT, 2K, 2003 Server, XP, Vista (Business and higher), Netware, Macintosh, UNIX and VMS
- UPS monitoring via floating contacts or serial interface
- Local or network shutdown on up to several hundred computers
- Integrated SNMP subagent (RFC 1628)
- Graphical interface with all UPS information
- Graphical interface on UNIX, MAC, VMS (JAVAMON)
- Event-based dispatch of network messages
- Event-based dispatch of e-mails and SMS
- Logging of all UPS status information and measurements in MS-Excel file
- Schedulers for time-controlled execution of reboot, shutdown etc.

Line fail

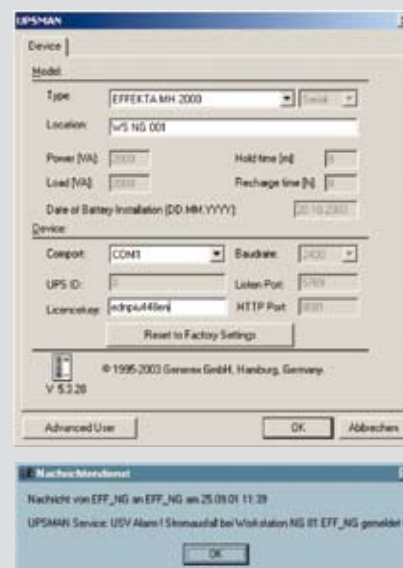

Normal operation

UPSMON module (right-hand images)

- Monitoring of all UPSs connected via UPSMAN/SNMP adapter
- Remote network control of all UPS
- Graphical representation of UPS input data (current, voltage)
- Reading and display UPSMAN event log files
- Programming UPSMAN scheduler
- Graphical interface with all UPS information
- Graphical interface on UNIX, MAC, VMS (JAVAMON)

UPSMAN module (right-hand images)

- UPS monitoring via with floating contacts or serially
- Local or network shutdown
- Integrated SNMP subagent (RFC 1628)
- Event-based dispatch of network messages
- Event-based dispatch of e-mails and SMS
- Logging of all UPS status information and measurement data
- Scheduler for time-controlled execution of reboot, shutdown etc.
- Password protection for all UPS remote functions
- Time dependent control of up to four consumer units (optional hardware necessary)
- Configuration parameters identical on all platforms (UNIX, Windows, Netware, VMS, MAC)
- UPSMAN runs in the background as an independent service process

UPSMAN configuration

Message:
"line fail"

RCCMD (optional client module / bottom left image)

- Available for Windows 9x, NT, 2000, XP, Vista (Business and higher) Network, Mac OS (up to 9.x), UNIX and VMS
- Currently for 25 operating systems, older ones also available
- Unlimited number of clients possible
- Sequential network shutdown configurable
- Configuration of clients on network
- Event-based connection with UPSMAN
- Simple installation and configuration
- Protected against unauthorised client regulation
- No network load at all

SNMP

for all EFFEKTA® AC UPSs (400VA-300kVA)

CS 121 SNMP adapter

The CS121 is equipped with a 32-bit processor, 8 MB RAM, 4 MB Flash, 2 serial interfaces and a 10/100MBIT network connection.

COM1 is provided for communication with the UPS, COM2 may be used for configuring the adapter, connection to a modem or to forwarding UPS data to other computers.

Other features in the area of UPS visualisation and the remote-controlled network shutdown option (RCCMD) make the CS121 easy to operate and increase its range of application.

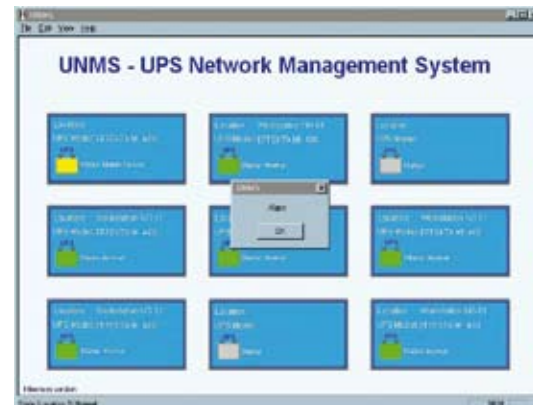

Optionally the CS121 "Budget" (right hand picture) is available for reasonable network solutions. This version of the adapter is for the limited purpose of network communication, so it is not equipped with the additional interfaces of the "Professional" version (picture at the top of the page).

- Powerful 32-bit RISC processor, 8MB RAM, 4MB Flash
- Supported protocols: SNMP, HTTP, Telnet, UPSMON, PPP/ SLIP, SMTP and FTP, Modbus
- 10/100 Mbit Ethernet connection
- 2 serial RS-232 interfaces (RS-422/ 485 optional)
- Modem support for UPS dialer and internet connection
- Integrated WEB server
- Visualisation via UPSMON, JAVAMON, UNMS, NMS, WEB browser or TELNET
- Support UPS standard MIB RFC1628

Configuration and monitoring via web browser

UNMS (9 UPSs)

UPSMAN module

- UPS monitoring via floating contacts or serial interface
- Local or network shutdown
- Event-based dispatch of network messages
- Event-based dispatch of e-mails and SMS
- Schedulers for time-controlled execution of reboot, shutdown etc.
- Password protection for all UPS remote-functions
- Configuration via common web browsers
- Monitoring via UPSMON possible

UNMS UPS monitoring panel (freeware)

Available for Windows 95/ 98/ ME/ NT/ 2000 / XP / Vista (Business and higher)

- Clear representation of all network UPS
- Up to 9 UPS in network can be monitored (freeware version)
- Simple configuration
- Number of connections adjustable
- Acoustic alert
- Expandable on request
- SNMP adapter support
- Up to 1500 nodes optional

USW ("UPS SNMP Watch", left hand image)

- Monitoring of parallel and single UPSs
- Clear representation of all UPS status information
- User-defined configuration of all events
- Sequential network shutdown of computers in homogeneous and heterogeneous networks
- Available for UNIX and Windows NT/ 2000 / XP / Vista (Business and higher)
- UPS control via SNMP adapter and SNMP software agent (UPSMAN)
- Further graphical interfaces started via mouse-click (UPSMON, JAVAMON)
- Java-based program

External bypass

An external bypass can be used to guarantee optimum availability of the EFFEKTA® UPS systems, particularly for critical applications. During UPS maintenance, the bypass bridge the UPS and provides the load with uninterrupted power after a manual changeover.

Type	Z00/Byp016A-000
Adaptable up to (UPS power in kVA)	3kVA
Socket	Single-phase hardwired
Mounting/construction	Wall-mounting

Type	Z00/Byp016A-A02
Adaptable up to (UPS power in kVA)	3kVA
Socket	Single-phase pluggable
Mounting/construction	19" rack, 2U

Type	ZRO/Bypk40A-000
Adaptable up to (UPS power in kVA)	6kVA
Socket	Single-phase hardwired
Mounting/construction	19" rack, 2U

Type	Z00/Byp063A-000
Adaptable up to (UPS power in kVA)	30kVA
Socket	Three-phase hardwired Optionally one-phase hardwired
Mounting/construction	Wall-mounting

Type	Z00/Byp100A-000
Adaptable up to (UPS power in kVA)	40kVA
Socket	Three-phase hardwired
Mounting/construction	Wall-mounting

Further models on request.

P-Bank

EFFEKTA P-Bank

Portable Battery Bank

The **EFFEKTA® P-Bank** is your perfect mobile power supply for most mobile devices with a DC input of maximum 19V / 3.5A.

Simply connect the P-Bank to your laptop, mobile DVD player, digital camera, camcorder, portable CD player, PDA, mobile phone, GPS unit or other portable device to prolong its operating time. In addition to powering your devices, the P-Bank will charge their internal batteries at the same time.

As a result of its low weight and small size, you can take the EFFEKTA P-Bank just about everywhere with you.

- Extension of your laptop's battery time up to 4 hours.
- Compact design for easy transport.
- Minimal weight for easy transport.
- Precious design.
- Selectable output voltage from 5 up to 19VDC.
- Can be used instead of your Laptop's power supply.
- Second DC output in the form of a USB socket with 5V, 1A.
- Automatically reset to 5V output to prevent damage of your mobile devices.
- Clearly arranged LED-array for voltage and batteries capacity.

Options:

- Additional battery to extend operating time.
- More than 50 adapter plugs for most standard mobile phone and PDA models, etc.

Left hand Image: Scope of delivery of the P-Bank

1. Battery
2. Leather case
3. Power supply (AC input 100~240V,
DC output 19V/ 3.2A)
4. Output cable
5. DC plug adapters (8 pcs.) with bag

Bottom image: Clearly arranged
voltage/capacity LED display

Specifications

Battery service life	Approx. 300 charging/ discharging cycles
Charging time to 100%	3-4 hours (first charge approx. 4-5 hours)
Battery type	Rechargeable Li-polymer accumulator, 2300 mAh
Nominal power output	50 Watt
Maximum power output	< 65 Watt
Maximum output current	3.5A
Output voltage	5V/ 6V/ 7.5V/ 9V/ 12V/ 14V/ 16V/ 19V selectable/ stabilised
USB additional output	5V, 1A
Battery expansion	Optional/ doubling of capacity
Weight	400g
Dimensions (H x W x D in mm)	23.4 x 83.3 x 172.7

Overview of supplied adapters:

<p>Type A</p> <p>4.75 x 1.7 x 10.5mm</p>	<p>Type B</p> <p>5.5 x 2.1 x 10.5mm</p>	<p>Type C</p> <p>5.5 x 2.5 x 10.5mm</p>	<p>Type D</p> <p>6.3 x 3.0 x 10.5mm</p>
<p>Type E</p> <p>6.5 x 4.3 x 1.35 pin x 10.5mm</p>	<p>Type V</p> <p>4.0 x 1.7 x 10.5mm</p>	<p>Type Z</p> <p>3.45 x 1.4 x 10.5mm</p>	<p>Type 03</p> <p>2.4 x 0.7 x 10.5mm</p>

The P-Bank is supplied with a selection of eight plug adapters that are suited to many DC input jacks on mobile devices

An additional battery can be connected via an expansion port to extend the operating time of your mobile devices:

BT batteries

BT 12-18

BT 12-28

Our long-standing experience with emergency power systems and uninterruptible power supply units is our guarantee for the highest quality and reliability of EFFEKTA® batteries.

BT batteries are ideally suited for use in:

- Uninterruptible power supplies (UPSs)
- Telecommunications systems
- Fire alarm and safety systems
- Medical equipment
- Photovoltaic applications

Advantage of BT batteries:

- Fully maintenance-free
- High recombination in cycle activity
- Valve-regulated plastic container as overload protection
- Excellent high-current capability
- Classified as non-dangerous in accordance with IATA
- Cycle-resistant (more than 400 recharging/discharging cycles up to 50% DOD)
- Robust construction
- Location-independent

BT 12-0.8

BT 12-5

BACS

BACS, the Battery Analysis & Care System, represents a groundbreaking innovation in the field of battery secured power supplies. This patent-pending technology sets completely new standards in terms of true battery management. BACS guarantees optimum safety and capacity of the battery pack throughout its entire life cycle, thus safeguarding the functionality of your power supplies.

BACS is available as build-in-version as well as external version for many EFFEKTA®-UPSs. It is also available on demand for different battery-systems.

General functions of BACS:

- Automatic adjustment of the battery pack to parent systems (control circuits enable automatic harmonisation with the charger)
- Uniform battery statuses are guaranteed via a controlled equalizing process
- Internal resistance, temperature and voltage measurements enable battery status monitoring and automatic compensation of key parameters
- The system is equipped with a status display with alarm output
- Communication via RS232, SNMP or voltage-free contacts

BACS can find out each damaged or weak battery before the whole system gets critical

Integration of BACS technology benefits a complete system (battery pack) in the following ways:

- Increase in useful life of the batteries and consequently also the entire battery pack.
- Guarantees maximum possible system capacity at all times (increase of up to 20%).
- Warnings output in the case of weak or defective systems, in particular display of the defective battery block. Important especially in safety-critical areas such as UPS equipment.
- Alarm if maximum ratings are exceeded (e.g. excessive battery voltage or temperature).
- Existing UPS equipment can be upgraded at any time
- Individual battery blocks can be exchanged (traditional battery management requires all batteries to be exchanged).

Top image: MHD-display with BACS-messages

BACS

How BACS works and its benefits in comparison to conventional battery-management-systems:

Traditionally, batteries in all common UPS systems have been connected and charged in series. The voltage present at the batteries is monitored. This is normally approx. 12-13V or a multiple thereof in accordance with the battery voltage. In this way, it is possible to measure whether the necessary voltage to supply the required battery capacity is available. EFFEKTA®'s BACS is working more accurately:

Fig. 1: In series connected and charged batteries have different capacity because of different conditions. As a result of natural ageing, these batteries already have different charge statuses after only a short period of use due to internal chemical processes.

Fig. 2: Standard charging of the batteries using traditional methods causes overcharging or deep discharging and damage to individual batteries, which in turn compromises the reliability of the entire system.

The BACS benefits:

1. Each battery is individually monitored via a dedicated processor-controlled "RTV" module. This also enables defective batteries on a system to be identified.

This eliminates one important weak spot of conventional systems: Even defective or discharged batteries can supply the required 12-13V for a short period, which often causes the incorrect assumption in battery management terms that the battery status is OK. This leads to an excessively rapid discharge in the case of a power failure. Not so with BACS because weak or defective batteries are reported on time.

2. The user is informed of defective or weak batteries BEFORE any potential damage occurs.

In conventional systems the capacity of the battery/ batteries is actually depleted, although the display (LED chain, LCD display or software) states otherwise. (s. item 1.) The safety of a UPS system is thus no longer guaranteed. The necessary autonomous time for a secure shutdown may not be available, which would result in the uncontrolled crash of all consumers.

200 Ah-batteries with BACS in Quasar batterie cabinet

Detail view of single modules. Detection and exchange of defective batteries easily possible.

3. Each battery is individually monitored via a dedicated processor-controlled "RTV" module. This also enables defective batteries on a system to be identified. (Each single battery can be changed instead of the more expensive exchange of whole battery line)

Traditional battery management systems have following restriction: In the case of multiple batteries connected in parallel, only one average voltage value is calculated per block, which can cause individual defective batteries amongst intact ones to be overlooked, thus diminishing the capacity of the entire system.

On some battery management systems, voltage measurements can be set to run over a defined long period with a specified load, but these are of no help in this case.

4. The batteries of a system are charged to the same level, which increases both the overall capacity and the life expectancy of the system.

This eliminates another weak spot of conventional systems: One defective battery can have such a negative impact on the charging behaviour of intact batteries of the system that these too are damaged. The defective battery thus "infects" the others.

Fig. 3: All batteries attain the same charging level at the end of the charging process, avoiding overcharging or deep discharging of individual batteries and optimising overall capacity.

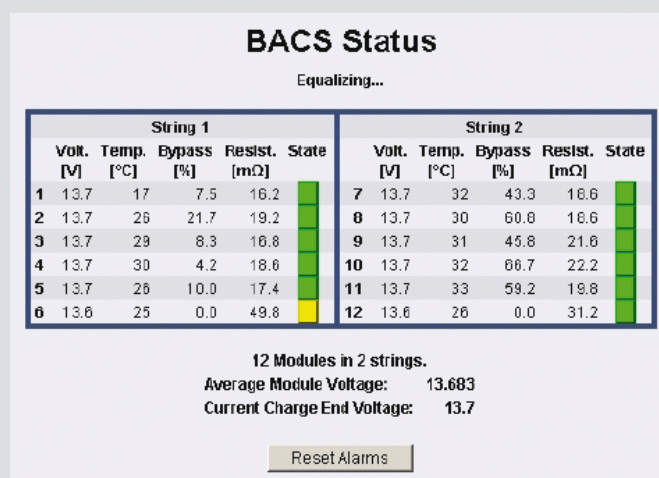

Fig. 4: Remote monitoring of battery systems via BACS and monitoring software increases the system's stability

BACS

Structure of the overall BACS system:

All batteries in the system are equipped with a control unit (data collection, battery controller) – the “RTV” module.

The bus system guides all data to the BACS nerve centre, the core module. This handles the entire management of the battery pack including signal output.

Detailed functions of the RTV module:

Protection Circuit:

Protects the battery module from over-voltage by destroying an irreversible fuse (conducting path).

Ri-Measure:

Measuring channel and signal conditioning of the internal resistance measurement. Measurement is only active when no equalizing (bypass switched off) occurs.

Voltage Measure:

Measuring channel for voltage measurement.

Bypass:

The bypass channel enables a cross-flow that is used both for equalizing and as an offset-signal generator. Appropriately deployed resistances serve as a fuse in the case of a bypass short circuit.

Temp. Measure:

A sensor outside the board records the battery temperature. These data are important for monitoring whether the thermal range of application is adhered to and at the same time to initiate any necessary corrections, e.g. of the final charging voltage.

Controller:

The controller records, controls and processes all signals and data. Additionally, it secures data exchange via the communication channel.

Indication:

The integrated LED displays the operational readiness of the module via a flashing signal. Other optical messages are conceivable.

Communication Port:

The galvanically isolated communication channel enables data exchange with parent systems; the connection enables all subscribers to listen, and just one replies to the central module.

Heat sink:

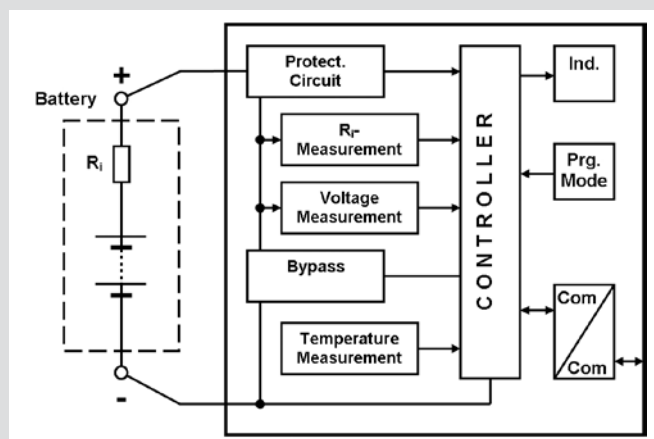

The electrical energy generated via e.g. equalizing is dissipated as heat.

Carrier:

A carrier for affixing each RTV module is adapted to each battery type.

Panel:

Board for the RTV module electronics.

Classification of the RTV modules

The battery modules (RTVC001 to RTVC004) are designed exclusively for lead batteries with a nominal connection voltage of 12V. The description section CXXX specifies the corresponding capacity class.

This guarantees that the module type (RTVCXXX) is suited to the intended battery capacity. The following RTV modules are available:

Class:	Capacity range: (battery capacity)	Resistance range: (internal resistance measurement)	IB/[A]*	IP/[A]**
C001	7 – 12 Ah	1.1 – 110 mΩ	0 – 0.1	0.2
C002	>12 – 28 Ah	1.0 – 100 mΩ	0 – 0.3	0.6
C003	>28 – 65 Ah	0.6 – 60 mΩ	0 – 0.8	1.6
C004	>65 – 200 Ah	0.3 – 30 mΩ	0 - 3	4.6

BACS

Descriptions of the core GX module (BACS Webmanager)

The BACS WEBMANAGER is the core of BACS. The module both provides the link to parent systems (PC, server, web) and also controls all battery modules located in the system. The collected data are managed and saved, and statuses are correspondingly displayed or signalled. The text output on the display is limited to a few messages (several alarms or statuses or current actions). Important data are transferred to the parent WEBMANAGER system and statistically processed accordingly.

The BACS WEBMANAGER can manage up to 150 modules. The BACS WEBMANAGER is supplied as an external unit in its own housing. The "bare" BACS WEBMANAGERS (without casing) can be installed inside the unit if customers require this version. The BACS WEBMANAGER can thus be directly integrated into a UPS or battery pack, for instance.

In summary, the BACS Webmanager provides the following functions:

- Management of all BACS modules/ communication with up to 150 modules (module bus)
- Simple display of the operating statuses/ alarms via the LCD display (16x2 key for scrolling in the display, LED for optical control of the function and as a warning notice (red "fault" LED))
- Acoustic signalling
- Alarm output (relay contact)
- "Real-time clock" for linking/ measuring time and data
- Bulk storage (CF card) for archiving the data over a long period (min. 2-10 years, depending on the size of the CF card)
- Hardware and software "watchdog" for monitoring the Webmanager's own operating safety. Signal output via alarm contact
- Ports provided: 2x RS232, 1x Ethernet
- 5V DC input for general module power supply
- I²C bus between the web target, the peripheral manager and the BACS modules

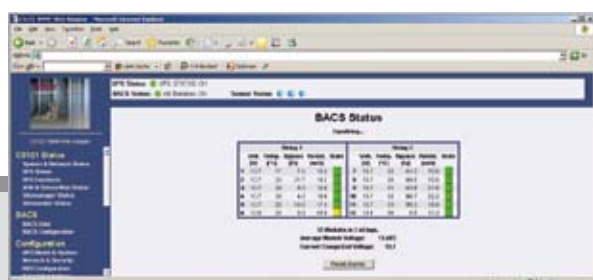

BACS and communication via the Webmanager

Software and functional scope:

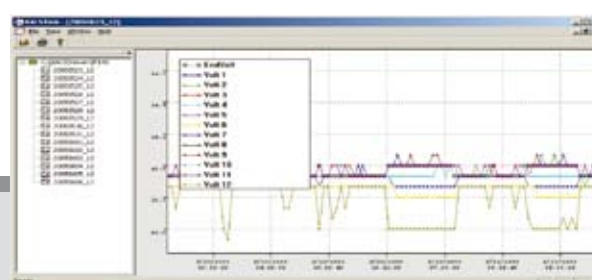

As a rule the CS121 chip takes precedent over the entire functionality of the core GX module. The CS121 chip essentially handles administration in the same way as the classic USV CS121 SNMP web adapter, the difference being that a BACS system is monitored in this case.

The web browser is also used to set the battery parameters to adapt each module to the specifics of the battery manufacturer.

The web browser displays a warning (yellow) for batteries that are weak or about to fail. As soon as a certain threshold value is crossed, the symbol turns red and a system alarm is activated (acoustically and via the network, e.g. as an e-mail).

For the graphical evaluation of the data, either a custom EXCEL file can be created or the user can use the BACS VIEWER, an external Windows program that can read the data across the network and display them graphically. BACS VIEWER is available as freeware.

DC UPS DIN rail

12VDC–48VDC

For installation in electrical control cabinets, on DIN rails or anywhere that protected 24V (or 12V and 48V) is required; for instance for entry-control systems, manufacturing and process control systems.

The EFFEKTA® battery with 7/12/18Ah is connected to the UPS and supplies fully uninterrupted load up to the end of cell voltage in case of a mains failure. The battery is optionally available in a DIN optional rail cabinet.

- Compact construction
- Redundant parallel switching possible from 300W
- Alarm outputs for mains fail, battery low and remote off
- Output voltage internally adjustable for low-maintenance and maintenance-free battery types
- Temperature-regulated charging voltage

DC power supply

DC ST601

-48 / 60V power supply system including:

- 1U shelf
- Max. 2 x 600W rectifier
- Power distribution
- Controller

Description

The DC ST601 power supply system is designed for various applications such as digital access, wireless base stations, microwave links as well as PABX. Numerous options provide solutions for global applications in different environments.

The integrated modular power system allows flexible adaptations. It contains up to 2 rectifiers GR 600 with 48 or 60V, AC- and up to 6 separate protected DC-connections, battery fuses LVD, and power system controller. These features together with the very short depth are the key factors for the success of this power system, offering cost-effective and reliable solutions.

This compact and high density power supply system is the perfect choice for space-critical locations.

Rear view

Main features

- 19" / 1U shelf power system up to 1200W
- High power density
- Very short depth
- Fits into 300mm deep ETSI cabinets
- Fan cooled rectifiers GR 600 (48 or 60V)
- Integrated power distribution
- Easy installation
- Dimensions (h x w x d) 44.45 x 430 x 280mm

Applications

- DC UPS systems
- Digital subscriber line (DSL)
- Fiber in the loop
- Transmission
- PBX
- Network components

GR 600

Rectifier 48 / 60V, 600W

Left hand image: rear view
Right hand image: front view

Description

GR 600 is a single phase, hot-pluggable, fan-cooled rectifier. The outstanding power density of this product offers the optimum shelf solutions with 1U shelf DC ST601 and 2U shelf DC ST602.

The short depth and extended operating temperature range support compact installation in space critical pole-mount applications. The high efficiency supports the operator's effort for energy saving for the backup power solution and requires less cooling energy due to the low losses. The very low audible noise is the key factor for installations in urban areas. Together with the advanced controller, the power solution offers additional benefits to optimize the running cost of the total site.

The typical applications for this rectifier are both in indoor and outdoor environments, which is a perfect solution for digital subscriber line (DSL), transmission, wireless infrastructure, core network components, telecommunication networks and data networks.

Main features

- Space saving - Very high power density (up to 14W/in³)
- Energy saving - High efficiency up to 92%
- Easy installation - Hot pluggable, connectors at the rear
- Low audible noise - Fan cooled with speed control
- Wide input voltage range 80 ... 300V_{rms}
- Protection against loss of Neutral and AC overvoltage
- Power factor correction - Sinusoidal input current
- Optimized power availability to recharge batteries - Constant output power characteristic
- Operating temperature range up to 75°C (167°F)

Applications

- Digital subscriber line (DSL)
- Transmission, PBX
- Fiber in the Loop
- Wireless base stations, Network components

DC power supply

DC ST1603

-48 V power supply system consisting of:

- 3U Shelf
- Max. 4 x 1600W rectifiers
- Power distribution
- Controller

Description

The DC ST1603 is a power supply system for -48V with a maximum power up to 6400W with 3-phase input.

The integrated modular power system allows flexible adaptations. It contains up to 4 rectifiers of type GR 1600, AC- and DC-connections, battery connection and power system controller PSC 1 / PSC 3. Other configurations are available on request.

These features together with the very compact depth are the key factor for the success of this power system and it offers cost-effective and reliable solutions.

This power supply system is designed for various applications such as digital access, wireless base stations, microwave links as well as PABX. Feel free to ask for individual solutions.

Features

- Modular design
- 19"- 3U rectifier-shelf (standard) + controller PSC1/3
- Easy connecting and mounting of shelf
- Fan cooled rectifiers GR 600 (48 or 60V)
- Hot pluggable
- All connectors at the rear
- Efficiency $\leq 92\%$
- Integrated power distribution

Applications

- Digital subscriber line (DSL)
- Transmission
- PBX
- Wireless base stations
- Network components

GR 1600

Rectifier 48V, 1600W

Left hand image: rear view
Right hand image: front view

Description

GR 1600 is a single phase, hot-pluggable, fan-cooled 48V rectifier. The outstanding power density of this product offers the optimum 1U or 3U 19IN shelf solutions.

The short depth and extended operating temperature range support compact installation in space critical pole-mount applications. The high efficiency supports the operator's effort for energy saving for the backup power solution and requires less cooling energy due to the low losses. The very low audible noise is the key factor for installations in urban areas. Together with the advanced controller, the power solution offers additional benefits to optimize the running cost of the total site.

The typical applications for this rectifier are both in indoor and outdoor environments, which is a perfect solution for digital subscriber line (DSL), transmission, wireless infrastructure, core network components, telecommunication networks and data networks.

Main features

- Space saving - Very high power density 24W/in³
- Energy saving - High efficiency 92%
- Easy installation - Hot pluggable, connectors at the rear
- Low audible noise - Fan cooled with speed control
- Wide input voltage range: 88 - 300Vrms
- Protection against loss of Neutral and AC overvoltage
- Power factor correction - Sinusoidal input current
- Constant output power characteristic
- Operating temperature range up to 75°C (167°F)

Applications

- Digital subscriber line (DSL)
- Transmission, PBX
- Wireless base stations, Network components

DC power supply

DC ST2010

-48 / 60V power supply system consisting of:

- 5U shelf for power distribution and controller
- 5U shelf for max. 6 x 2000W rectifiers

Left hand picture:
rear view
Right hand picture:
front view

Description

The DC ST2010 is a very compact 19" / 5U shelf for the rectifier GR 2000 with a maximum power of 12kW and three phase input.

Due to the modular design the DC ST2010 can be assembled with up to 6 rectifiers GR 2000. In the power distribution unit there also can be found the controller, LVD/PLD, current sensors, battery fuses and up to 15 separately protected DC-outputs. Other configurations can be easily developed on demand.

These are the key factors of the success of this power system and it offers a cost-effective and reliable solution.

The typical applications for this rectifier shelf are both in indoor and outdoor environments, which is a perfect solution for wireless base stations, core network components, telecommunication networks and data networks. Please feel free to ask for individual solutions.

Main features

- Modular structure
- 19" rectifier shelf / 5U
- Easy to stack shelves
- Up to 12 kW installed power
- Fan cooled rectifiers FR 48V – 2000W – E
- Hot pluggable, all connectors at the rear
- Efficiency $\geq 92\%$
- Integrated 3 phase AC terminal (3L + N + PE)

Applications

- Indoor and outdoor
- Medium to large power systems
- Shelf power solutions
- Telecom, wireless, Datacom

GR 2000

Rectifier 48/60V, 2000W

Right hand picture: rear view
On the far right: front view

Description

The GR 2000 is an up to date high frequency switched mode telecom power supply for both 48V and 60V applications.

It consists of two power processing stages. The first one is a boost based power factor corrector using the zero current switching technique. The second stage is a phase shifted full bridge DC/DC converter using state-of-the-art soft switching technology.

The GR 2000 offers output characteristic with power limit matching a constant power character of modern telecom loads and thus reducing the required number of rectifiers.

The primary applications of the rectifier are modular power systems for telecommunication equipment.

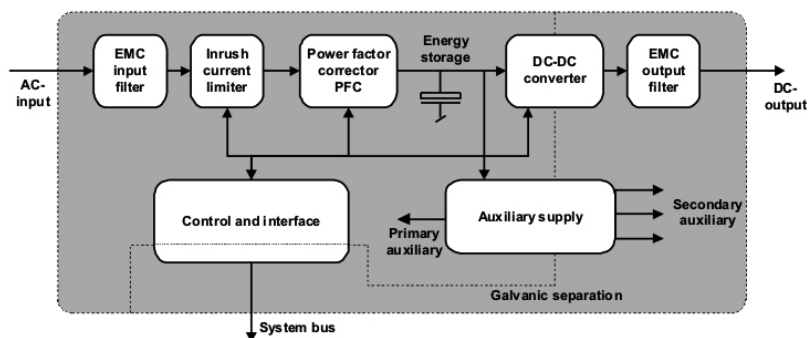

Main features

- Efficiency $\geq 91\%$
- Compact (500W / l) and light (4.4kg)
- Hot pluggable, all connectors at the rear
- Fan cooled with air flow monitoring
- Wide input voltage range: 88 - 276V_{rms}
- Power factor ~ 1.0 (sinusoidal input current)
- Selectable output voltage 48V or 60V
- Constant output power characteristic
- Analogue system bus
- Operating temperature range up to 70°C

Applications

- Indoor and Outdoor
- Medium to large power systems
- Shelf power solutions
- Telecom, wireless, Datacom

Power System Controller

Controller for power supply systems

DC ST 601 up to DC ST 2010 / rectifiers GR 600 - GR 2000

PSC 1

PSC 3

Description

The PSC 1 is a simple power system controller for small power systems. It consists of a compact central unit providing basic I/O periphery, and of an analogue based communication bus to the rectifiers. The user friendly display quickly displays basic information about the current status of the power system. The controller's battery management with regularly accomplished capacity tests is one of the key factors for the availability of a power system. The PSC 1 controller allows also remote alarming by means of potential-free relay contacts.

Features

- Float voltage control
- Temperature compensation
- Battery current limit
- Boost charge
- Battery test, advanced capacity test
- LVD control
- Analogue system bus
- Simple user interface

Applications

- Power supply systems
- Digital subscriber line (DSL)
- Fiber in the loop
- Transmission
- PBX

Description

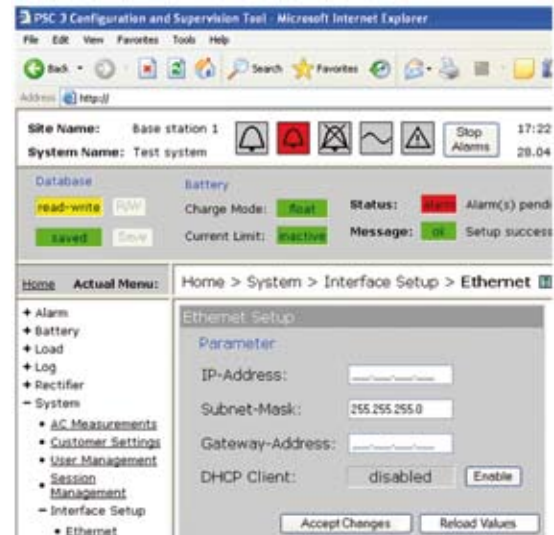

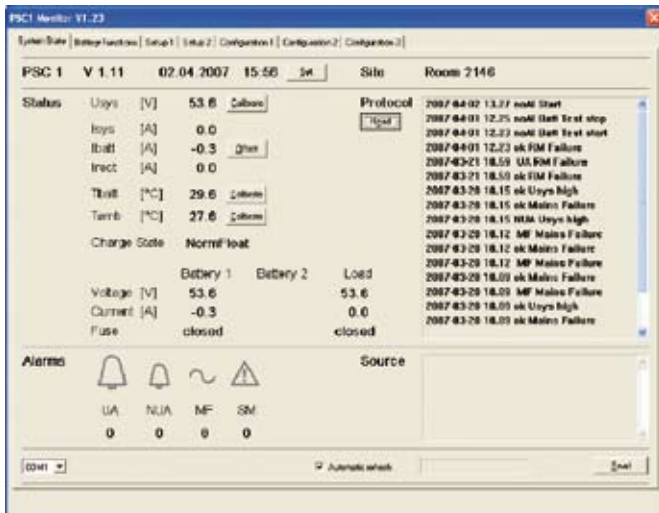

The PSC 3 is a 3rd generation power system controller for small to very large and complex power systems. It consists of a central unit, which provides basic I/O periphery, and of a very reliable CAN standard based communication bus. The front end modules are located close to the elements to be monitored. The benefit is an easy wiring, which is perfect for expandable power systems with decentralized distributions (BDFB) and batteries in separate rooms. The integrated PLC offers the flexibility for monitoring and control of auxiliary devices, later functions upgrade and system capacity expansions. The PSC 3 allows remote alarming by means of potential-free relay contacts or via modem or LAN / Ethernet. The SNMP offers enhanced remote alarming and is designed to work with SNMP managers. An integrated web server offers a user friendly interface for detailed monitoring and control with a standard web browser.

Features

- Modular power system controller
- Integrated PLC for flexible system configuration
- Easy system expansion
- Digital system bus
- Enhanced battery management
- Remote monitoring with modem or LAN
- Integrated web server
- SNMP
- Energy saving functions
- New alarming concepts
- Monitoring of auxiliary devices
- Advanced site monitoring & control

Applications

- Power supply systems
- Decentralized power plants

DC-UPS systems

Product Description

The DC Power Rack DCPR 48-66 is specifically designed for use in telecommunications networks. Fuse-protected 48V power supplies from EFFEKTA® are already in successful operation in TETRA and TETRAPOL networks. Available versions: 108V and 216 VDC.

Up to 4 rectifier modules PSR308 can be integrated into the subrack. The unit is equipped with a supervisory module combined with a fan tablet and DC distribution.

Key Features

- High reliability
- Simple installation and operation
- Forced fan cooling
- USB interface for PC connection
- Alarm contacts for multiple configurations
- Intelligent battery management
- CAN-Bus interface
- Hot pluggable controller and DC distribution modules
- Optional Ethernet (SNMP compatible) interface module
- LVD and PLD functionality

Front view of DCR PSR 327-10.8

System Components

Rectifier module PSR327:

110 / 220VDC; 2700W; 12.9A / Key Features:

- Single-phase modul with sinusoidal input current (PFC)
- Input overvoltage protection
- Wide input voltage range (100-254 VAC)
- „Hot-Plug-In“ design with backplane connection
- High power density
- CAN- Bus interface
- Integrated decoupling from the DC bus

Control Unit UPC3 with integrated fan

Key Features:

- Extensive battery management
- Freely programmable signalling concept
- „Hot-Plug-In“ design with backplane connection
- Integration of external alarm structures possible
- Remote controll. + monitoring via direct PC link, modem or SNMP
- CAN- Bus interface

Specifications

Type	DCR PSR327-xxx
Input voltage	230VAC
Output voltage	110 / 220VDC
Output capacity	8100 / 10800W
Mains	3 phases, N, PE
DC output	Screw connection M10
Analog inputs	3 x shunt (60mV); 2 x temperature sensor 1 x battery tapping point, analog inputs on ext. connector board sensor lead for output voltage
Signalling input	8 x potential-free, common ground
Signalling output	6 isolated relay contacts
Climatic conditions	Acc. IEC 721-3-3 Klasse 3K3/3Z1/3B1/3C2/3S2/3M2
Extended ambient temperature range	operation: -20°C up to +55°C storage: -40°C up to +85°C transport: -40°C up to +85°C
RoHS-compliance	yes
Dimensions	311 x 483 x 355 mm (HxWxD) 19" Sub-Rack, 3U
Weight	App. 6.1kg without rectifier
Weight rectifier	app. 3.8kg

Front view of DCR PSR 327-8.1

Rectifiers

Switched rectifiers for parallel-redundant power supply systems of high availability in the energy sector, telecommunications and industry; hot plug-in; processorcontrolled, charging voltages and characteristic curves can be adjusted manually and remotely, can be used with all battery types.

Example configuration DCR PSR327-10.8 HV
4 x PSR327-220V

Control unit UPC3 with integrated fan

- Extensive battery management
- Freely programmable signalling concept
- „Hot-Plug-In“ design with backplane connection
- Integration of external alarm structures possible
- Remote controll. + monitoring via direct PC link, modem or SNMP
- CAN- Bus interface

Inverters

Left hand picture:
single 110 VDC module

Right hand picture: Assembly set 19" sub
rack 2U incl. backplane for 3pcs. inverters
INV2xx and 1pc. static switch STS207

Product description

An INV-series inverter includes the newest switching technology with digital control. Due to this fact a dramatic reduction of volume and weight was achieved. With a state-of-the-art control solution it provides an excellent functionality and several protection features.

The inverter is able to run in parallel operation mode to increase the reliability of the AC system without any additional options. Additional modules can be integrated in wired slots during normal system operation. For higher reliability the hard wired synchronization bus between paralleled inverters is working in a redundant mode.

Up to 4 inverters can be installed in a 19"-subrack with only 2U. The module is prepared to operate with the new static switches of the STS series to increase the system availability furthermore.

Key features

- 1/4 x 19", 2U
- Excellent overall efficiency and high regulation speed
- "Hot plug-in" design with backplane connection
- High power density
- CAN-Bus interface
- Ability for parallel operation
- Temperature-controlled fan cooling
- Redundant synchronization bus
- Excellent sinusoidal output
- Input over/under voltage shutdown, overload and short circuit-proof

Available versions:

Inverters

EFFEKTA® WR-series

WR-012-1000 (front view)

Description

The EFFEKTA® WR-series inverters are ideally suitable in the low and middle performance range as AC power supplies for mobile applications.

Features

- Output Voltage 230V_{AC}
- Input Voltage 12 or 24V_{DC}
- Compact design
- Minimal weight
- Battery low alarm
- Overload-/voltage reversal-/short circuit-safe

Inverters

EFFEKTA® WRS-series

WRS-024-1500

Description

The EFFEKTA® WRS-series inverters are suitable in the low and middle performance range as AC power supplies for industrial and mobile applications.

Features

- Output voltage 230V_{AC}
- Input voltage 12, 24 or 48V_{DC}
- Battery low alarm
- Overload-/ voltage reversal-/short circuit-safe
- Screwable terminals on the rear side

WRS-024-1500 (rear view)

WRS-012-0700 (Identical design of 700/1000W-models except depth)

WRS-024-0350 (Identical design of 200/350W-models)

Specifications

Model	WRS-012-0200	WRS-024-0200	WRS-048-0200
Power	200W		
Output voltage	200/220/230/240V _{RMS} ±3%		
Input voltage	12V _{DC}	24V _{DC}	48V _{DC}
Low.Bat.-Shutdown	10.0V _{DC}	20.0V _{DC}	42.0V _{DC}
Dimensions H x B x T	71 x 119 x 230mm		
Weight	1.2kg		

Model	WRS-012-1000	WRS-024-1000	WRS-048-1000
Power	1000W		
Output voltage	200/220/230/240V _{RMS} ±3%		
Input voltage	12V _{DC}	24V _{DC}	48V _{DC}
Low.Bat.-Shutdown	10.0V _{DC}	20.0V _{DC}	42.0V _{DC}
Dimensions H x B x T	81 x 179 x 334mm		
Weight	3.8kg		

Model	WRS-012-0350	WRS-024-0350	WRS-048-0350
Power	350W		
Output voltage	200/220/230/240V _{RMS} ±3%		
Input voltage	12V _{DC}	24V _{DC}	48V _{DC}
Low.Bat.-Shutdown	10.0V _{DC}	20.0V _{DC}	42.0V _{DC}
Dimensions H x B x T	71 x 119 x 230mm		
Weight	1.6kg		

Model	WRS-012-1500	WRS-024-1500	WRS-048-1500
Power	1500W		
Output voltage	200/220/230/240V _{RMS} ±3%		
Input voltage	12V _{DC}	24V _{DC}	48V _{DC}
Low.Bat.-Shutdown	10.0V _{DC}	20.0V _{DC}	42.0V _{DC}
Dimensions H x B x T	102 x 278 x 413mm		
Weight	7.2kg		

Model	WRS-012-0700	WRS-024-0700	WRS-048-0700
Power	700W		
Output voltage	200/220/230/240V _{RMS} ±3%		
Input voltage	12V _{DC}	24V _{DC}	48V _{DC}
Low.Bat.-Shutdown	10.0V _{DC}	20.0V _{DC}	42.0V _{DC}
Dimensions H x B x T	81 x 179 x 298mm		
Weight	2.8kg		

Special DC appliances

“Powermanager“

Processor-regulated uninterruptible power supply system with 230V/50Hz/200VA AC output, five separate 24V/20A DC-outputs, battery monitoring, protection monitoring, watch-dog, in accordance with VDE0828/EN60849.

Production-redundant

Telecom power supply 48V/1800A

48V/2.7kW/55A charging rectifiers makes up a parallel-redundant UPS system with two maintenance-free 48V/1000Ah batteries, 1800A inverter with central installation control, low-discharging protection and SNMP-interface.

VOITH Hydro Power

Product	MD-1
Application	Constructed for industrial systems
Features	Online double-conversion with integrated auto bypass Mounting height 4U, to achieve a shortened modular depth of 300mm. All power lines, outputs and sockets for control signal (floating contacts) on hardwired Phoenix terminals. Optimised for 19" switch cabinet
Basic unit	MH RM 2000

EFFEKTA® UPSs are not only suited for use in computers, but also for all sensitive, power-dependent units. We have a solution for every kind of application. We are also experienced in custom designs and small production runs.

All models are available in standard enclosures or ac be supplied for switchboards or DIN rails.

Product	GSV („Gesicherte Stromversorgung“ [german])
Application	The GSV is intended to provide the needed power to electric drive units for doors during powerfailures in emergency situations.
Features	<p>The GSV provides up to 72 h standby mode and after that about 5 min with 500 W load. The system can be activated by an external dry contact.</p> <p>During a powerfailure after a delay (10 seconds default) a signal switch (500 ms impulse) will be sent to activate the electric drive unit.</p> <p>Back in normal mode the mains will be switched directly to the output.</p> <p>In normal mode the GSV-system is charging the internal batteries and in emergency mode it monitors the battery voltage.</p> <p>In- and output single phase hardwired Capacity 1000VA/670W (maximum 4,3 A) Cabinet prepared for wall assembly Electronics: IP65 Batteries: IP21 Dimensions (compl. HxWxD) 500x300x120 mm</p>
Basic unit	MT 1000

Service

Overview of maintenance and service contracts

1) Performance-based service

- Date: as customer requires
- Cleaning the installation
- Check-up of the mechanical condition and all installation parts
- Voltage check of AC current inter-circle
- Control and possible alignment of oscillator circles
- Examination and adjustment of all electric control circuits of inverter and rectifier
- Control measurement of thyristors, diodes, transformers, filter-elements etc, to guarantee a perfect operation of installation
- Capacity test of the batteries as customer requires
- Exchange of defective batteries after prior approval of cost estimate
- Invoice: at the valid EFFEKTA® cost rate

2) Partial-maintenance contract including spare parts excluding batteries

- Date: 1x annually
- Cleaning the installation
- Check-up of the mechanical condition and all installation parts
- Voltage check of AC current inter-circle
- Control and possible alignment of oscillator circles
- Examination and adjustment of all electric control circuits of inverter and rectifier
- Control measurement of thyristors, diodes, transformers, filter elements etc, to guarantee a perfect operation of installation
- Capacity test of the batteries as customer requires
- Exchange of defective batteries after prior approval of cost estimate
- Fault hotline
(response time: 24 hours Mon-Fri 8am- 5pm)
- Spare parts covered by maintenance fee
- 15% discount on batteries
- Minimum contract period: 4 years
- Invoice: via maintenance fee

3) Full maintenance contract including spare parts and batteries

- Date: 1x annually
- Cleaning the installation
- Check-up of the mechanical condition and all installation parts
- Voltage check of AC current inter-circle
- Control and possible adjustment of oscillator-circles
- Examination and attitude of all electric control circuits of inverter and rectifier
- Control measurement of thyristors, diodes, transformers, filter elements etc, to guarantee a perfect operation of installation
- Capacity test of the batteries as customer requires
- Exchange of defective batteries
- Fault hotline
(response time: 24 hours Mon-Fri 8am- 5pm)
- Spare parts and batteries via maintenance fee
- Minimum contract period: 4 years
- Invoice: via maintenance fee

Terms & Conditions

Terms and conditions for sales and delivery of EFFEKTA - Regeltechnik GmbH, Rottweil

Preamble

The following terms and conditions for sales and delivery form the basis of the delivery and service contracts of the contractor (user) and supplement the applicable law.

They are only applicable to businesses where the contract is made in the course of their business, legal entities of the public law or special authorities under public law.

I. Application

- Orders only become binding with regard to the type and scope of deliveries after the supplier confirms the order. Any changes and additions must be in writing.
- Where ongoing business relationships subsist, these terms and conditions also apply to future transactions even where they are not expressly communicated to the orderer. The terms and conditions are deemed to be accepted at the latest when the order is placed or the delivery or service is accepted. If alternative provisions of the orderer or supplier are to apply instead of these terms and conditions, these must be expressly agreed by the partners.
- Contrary or divergent sales terms of the orderer shall only be binding on the supplier if they have been expressly acknowledged by him in writing.

II. Prices

- A binding price shall only be deemed to have been set after the supplier confirms the order in writing. This is subject to the proviso that the order details on which the order confirmation is based remain unchanged. The supplier's prices are in EUR exclusive of any VAT applicable at the time of the delivery, unless other information is specified.
- If, in the course of a delivery period of more than four months, a change to the price basis occurs (increase in the price of raw materials, change of salary and wage rates), the supplier reserves the right to adjust the price accordingly.
- Packaging, postage and other shipping costs are not included and will be invoiced additionally.
- The orderer shall bear the costs of any changes to the product he requests after the order has been confirmed.
- Partial deliveries may be invoiced separately.

III. Delivery quantity, delivery period

- Production-related over- or underdeliveries of up to 10% of the order quantity are permitted.
- The supplier is permitted to make partial deliveries.
- The delivery periods commence with the date of order confirmation by EFFEKTA - Regeltechnik GmbH. The delivery periods specified by the supplier refer to the shipping date of the goods. They shall be deemed to have been observed if at this time the goods are dispatched from the factory or the orderer is informed that they are ready to be shipped.
- The agreed delivery time is only applicable after all technical and commercial details have been settled. Accordingly, all delivery times are provisional. Delivery times are only binding where they have been confirmed to the orderer as such in writing.
- If action on the part of the orderer is necessary for the manufacture of an item or the execution of a delivery, the delivery period shall not commence until the orderer has fully completed this action.
- In the event of a delay in delivery, the orderer may withdraw from the contract should a reasonable grace period expire without results. In the event of impossibility of performance on the part of the supplier, this right is available without the supplementary period. Delay in delivery is deemed to amount to impossibility if delivery does not occur for more than one month. Claims for damages (incl. any consequential loss) are excluded, without prejudice to clause 7; the same applies to reimbursement of expenses.
- The exclusion of liability regulated by clause 6 shall not apply where an exclusion or limitation of liability for damages for death, personal injury or damage to health resulting from a wilful or negligent breach of duty by the user or vicarious agents of the supplier has been agreed; further, it shall not apply where an exclusion or limitation of liability for other loss resulting from a wilful or grossly negligent breach of duty by the supplier or a wilful or grossly negligent breach of duty by a legal representative or a vicarious agent of the supplier has been agreed. Liability shall not be excluded where the supplier culpably breaches a fundamental contractual duty or a "cardinal duty", but instead limited to the foreseeable damages typical for the type of contract. The above applies correspondingly in the event of reimbursement of expenses.
- The limitations of liability stipulated in clauses 6 and 7 do not apply insofar as a commercial firm deal was agreed; the same also applies where the orderer can assert that he no longer has an interest in fulfilling the contract due to a delay for which the supplier is at fault.
- In the event of forces majores experienced by the supplier or his sub-suppliers, the delivery time shall be prolonged by a corresponding amount. This shall also apply in the event of intervention by official bodies, difficulties with the supply of energy and raw materials, strikes, lockouts and unforeseen obstacles to delivery, insofar as these are not the fault of the supplier. The supplier shall inform the orderer of any such event without delay.

IV. Transfer of risk, packaging and shipping

- Where the orderer collects the goods from the supplier's premises, risk passes with transfer of the goods to the orderer. Where the goods are shipped, risk passes on transfer of the goods to the carrier. Where the goods are delivered, risk passes when the goods leave the supplier's premises.
- In the event of delays to dispatch that are the fault of the orderer, risk passes on communication of readiness for shipping.
- Insofar as nothing else has been agreed, the supplier shall select the packaging and shipping type to the best of his judgment. Where requested in writing by the orderer, the goods may be insured against breakage, transport and fire damage at the orderer's expense.

V. Retention of title

- The supplier shall retain title to the deliveries until all current and future amounts due from the business relationship have been settled, even where the purchase price of specifically designated amounts due has been paid. In the case of rolling invoices, the retained title of the deliveries (goods subject to retention of title) counts as a security for the payment of amounts due on the supplier's account.
- In the event of conduct constituting a breach of contract on the part of the orderer, in particular late payment, the supplier is entitled to reclaim the goods. The orderer hereby agrees to the goods being reclaimed under these circumstances. Reclaiming the goods only represents a withdrawal from the contract where the supplier expressly declares this to be such. Any costs incurred by the supplier in reclaiming the goods (in particular transport costs) shall be borne by the orderer. Further, the supplier is authorised to prevent the orderer from selling on or processing the goods subject to retention of title and to revoke any direct debit authorisation that may have been issued. Once the purchase price and all costs have been paid, the orderer can require any goods reclaimed without an express declaration of withdrawal to be despatched.
- The orderer undertakes to handle the goods with care.
- The orderer may neither mortgage, pledge as security nor assign the goods delivered and corresponding amounts due. In the case of seizure or other third-party intervention, the orderer shall immediately inform the supplier in writing in order for him to file a claim in accordance with section 771 of the Civil Procedure Code. Any remaining costs outstanding to the supplier despite successful litigation as per section 771 of the Civil Procedure Code shall be borne by the orderer.
- The orderer is permitted to sell on, process or mix the goods in the normal course of business. In doing so he hereby assigns to the supplier all amounts due from selling on, processing, mixing or other legal grounds (in particular from insurance or non-permitted actions) to the extent of the final invoice amount agreed with the supplier (incl. VAT). The orderer remains authorised to collect these amounts due even after assignment, without prejudice to the authorisation of the supplier to collect the amounts due himself. However, the supplier undertakes not to collect the amounts due for such time as the orderer fulfils his payment obligations from the revenue received, is not in default of payment and no application to instigate insolvency proceedings has been made and no suspension of payment is in force. If this is the case, the orderer is required to notify the supplier on request of the assigned amounts due and debtors, to provide all information required for collection, to deliver up the associated documents and to notify the debtor (third party) of the assignment. The direct debit authorisation may be revoked by the supplier in the event of breaches of contract (in particular payment default) by the orderer.
- The retention of title also extends to the products arising as a result of processing, mixing or combination of the delivered goods to the extent of their full value, whereby these processes shall be deemed by the supplier to constitute manufacture. In the event of processing, mixing or combination of the goods with goods to which a third party retains title, the supplier obtains co-ownership in proportion to the objective values of these goods.
- For the purpose of securing the amounts due against the supplier, the orderer also assigns to the supplier the amounts due which arise in favour of a third party through the combination of the delivered goods with land.
- The securities owing to the supplier are not included where the value of his securities exceeds the value of the secured claims by more than 30%.
- The enforceability of the retention of title in the event of default on payment or exposure to loss and seizure of the delivered goods by the supplier represents withdrawal from the contract.

VI. Terms of payment

- All payments must be made in Euros exclusively to the supplier.
- Insofar as nothing else has been agreed, the purchase price must be paid via cash on delivery or advance cheque. In the latter case delivery shall proceed once the cheque has cleared. In exceptional cases payment terms of 14 days strictly net may apply.
- If the orderer defaults on payment, the supplier is permitted to demand default interest at eight percentage points above the base interest rate. The supplier may at any time produce evidence of higher interest damages and charge for these.
- Failure to observe the terms of payment, default or circumstances that pose a risk of reducing the orderer's creditworthiness will result in all of the supplier's claims becoming due for payment immediately. Further, the supplier is permitted after a reasonable grace period to withdraw from the contract or demand damages instead of performance.
- The orderer may only exercise offsetting rights if his counterclaims have been legally established, are indisputable or have been acknowledged by the supplier.
- The orderer is permitted to exercise a right of retention insofar as his counterclaim is based on the same contractual relationship.
- The supplier is under no obligation whatever to accept cheques and bills of exchange. Credit of this type is in all cases subject to redeemability (on account of payment, not on account of performance) and is deemed to be redeemed on the day that redemption value is available to the supplier. In the case of bills of exchange, any discount on presentation, stamp duty, bank charges and any direct debit charges shall be passed on by the supplier.
- The right to pursue any further contractual or statutory claims in the event of default is reserved.

VII. Responsibility for defects

If the orderer fulfils the duty of inspection, notification and rejection required of him in accordance with section 377 of the Commercial Code, the supplier is liable for defects of the delivery to the following extent:

- In the event of a not inconsiderable defect of the purchased goods, the supplier may choose either to correct the defect or supply a defect-free product (supplementary performance). In the event of failure of the supplementary performance, the supplier is authorised to undertake a further act of supplementary performance. Further, in the event of repeated supplementary performance, the supplier decides between re-supply or correction of the defect. Should one or both of these methods of supplementary performance be impossible or not proportionate, the supplier is permitted to refuse them. The supplier may also refuse supplementary performance for such time as the orderer does not fulfil his payment obligations towards him proportionate to the defect-free part of the performance.
- If supplementary performance as per clause 1 is impossible or fails, the orderer has the right either to reduce the purchase price accordingly or withdraw from the contract in accordance with the statutory provisions. These rights are open to the purchaser particularly where the supplier culpably delays or refuses the supplementary performance or if it fails for a second time. Insofar as the following (clause 4) does not provide otherwise, further claims of the orderer, regardless of their legal ground (in particular claims arising from the breach of contractual conditions and warranties, reimbursement of expenses with the exception of that provided for in section 439 subsection 2 of the German Civil Code, unlawful acts and other tortious liability) are excluded. This applies in particular to claims for damages beyond the thing purchased and for claims for the reimbursement of lost profits. This also covers claims that do not result from the defectiveness of the thing purchased.
- The above provisions also apply to the delivery of a different item or a lesser quantity.
- The exclusion of liability under clause 2 does not apply where an exclusion or limitation of liability for damages for death, personal injury or damage to health caused as a result of a wilful or negligent breach of duty by the user or wilful or negligent breach of duty by a legal representative or vicarious agent of the user has been agreed. It also does not apply where an exclusion or limitation of liability for other damages caused as a result of a wilful or negligent breach of duty by the user or wilful or negligent breach of duty by a legal representative or vicarious agent of the user has been agreed. Liability shall not be excluded where the supplier breaches a fundamental contractual duty or a "cardinal duty", but instead limited to the foreseeable damages typical for the type of contract. It is further excluded under clause 2. The exclusion of liability shall not apply if liability for personal injury or material damage to privately used items in the event of defects to the thing supplied applies under the Product Liability Act. Further, this also applies in cases covered by a guarantee by the supplier or where assurances were made as to specific properties of the goods purchased. Here a defect in this regard triggers the supplier's liability. The above applies correspondingly in the event of reimbursement of expenses.
- Claims for supplementary performance, damages and replacement goods/services are subject to a time limit of one year after delivery of the goods. This does not apply to goods which have been deployed in a building in accordance with their standard application and have caused this to become defective. The time limit here is five years. Claims for abatement and the exercise of the right to withdraw from the contract are excluded where the time limit for a claim for supplementary performance has been exceeded. In the case of clause 3 the purchaser may refuse to pay the purchase price to the extent that he would be entitled in the event of withdrawal or abatement. In the case of an exclusion of withdrawal and subsequent refusal to pay, the supplier is permitted to withdraw from the contract.
- Claims resulting from right of recourse to the producer are not affected by this section.
- No liability is accepted for damage resulting from unsuitable or improper use, defective installation by the orderer or a third party, defective or negligent handling or natural wear. Further, the supplier bears no liability for any damages caused by unsuitable equipment, defective building work, replacement materials, chemical and electrochemical or electrical influences (insofar as these are not the fault of the supplier) and improper alterations or maintenance work made without prior approval of the manufacturer on the part of the orderer or third parties. The same applies to unauthorised re-working or improper handling.
- Transport damages must be reported immediately to the delivering transport company. The carrier's instructions on subsequent procedure must be followed in all cases. Never should goods damaged in transit be sent to us either through us or the transport company without such instructions.

VIII. Breaches of duty

- The supplier's liability for breach of duty is limited to grossly negligent or wilful breaches of duty.
- No liability for the infringement of intellectual property rights of third parties is excluded, in particular when performing production tasks in accordance with the orderer's specifications. The supplier is not subject to a duty of scrutiny in regard to the intellectual property rights of third parties.

IX. Software

Insofar as programs are part of the scope of delivery, the orderer obtains individual unlimited usage rights, that is he may not copy them or use them for any other purpose. Multiple usage rights shall be subject to written agreement. In the event of an infringement of these usage rights, the purchaser shall be liable for the full extent of any resultant loss.

X. Place of performance, jurisdiction and applicable law

- The place of performance is Rottweil.
- The court of jurisdiction is Rottweil, insofar as the orderer is trading in the course of a business. The supplier is permitted to bring an action against the orderer in other permissible jurisdictions.
- The law of the Federal Republic of Germany applies with regard to all claims and rights resulting from this contract. The application of UN sale of goods law (CISG) is expressly excluded.

XI. Closing provisions

- Any changes to the contract or supplementary agreements are only effective if they have been approved in writing by the supplier.
- Rights of the orderer arising from the legal transaction with the supplier are not transferable.
- Should any individual provisions of these terms and conditions become partially or wholly ineffective or invalid, this shall not affect the validity of the remaining provisions. The parties to the contract undertake to agree to a ruling by means of which the purpose intended by the ineffective or invalid provision is largely achieved.

(As of: November 2006)
